## This page is **not** Valid HTML 4.01 Frameset!

Below are the results of attempting to parse this document with an SGML parser.

1. **Error** *Line 17 column 43: there is no attribute "FRAMEBORDER".*

```
<frameset rows="68,*" cols="*" frameborder="NO" border="0" framespacir
```

You have used the attribute named above in your document, but the document type you are using does not support that attribute for this element. This error is often caused by incorrect use of the "Strict" document type with a document that uses frames (e.g. you must use the "Transitional" document type to get the "target" attribute), or by using vendor proprietary extensions such as "marginheight" (this is usually fixed by using CSS to achieve the desired effect instead).

This error may also result if the element itself is not supported in the document type you are using, as an undefined element will have no supported attributes; in this case, see the element-undefined error message for further information.

How to fix: check the spelling and case of the element and attribute, (Remember XHTML is all lower-case) and/or check that they are both

allowed in the chosen document type, and/or use CSS instead of this attribute.

2. **Error** *Line 17 column 55: there is no attribute "BORDER".*

```
<frameset rows="68,*" cols="*" frameborder="NO" border= "0" framespacir
```

You have used the attribute named above in your document, but the document type you are using does not support that attribute for this element. This error is often caused by incorrect use of the "Strict" document type with a document that uses frames (e.g. you must use the "Transitional" document type to get the "target" attribute), or by using vendor proprietary extensions such as "marginheight" (this is usually fixed by using CSS to achieve the desired effect instead).

This error may also result if the element itself is not supported in the document type you are using, as an undefined element will have no supported attributes; in this case, see the element-undefined error message for further information.

How to fix: check the spelling and case of the element and attribute, (Remember XHTML is all lower-case) and/or check that they are both allowed in the chosen document type, and/or use CSS instead of this attribute.

3. **Error** *Line 17 column 72: there is no attribute "FRAMESPACING".*

```
... "*" frameborder="NO" border="0" framespacing= "0">
```

You have used the attribute named above in your document, but the document type you are using does not support that attribute for this element. This error is often caused by incorrect use of the "Strict" document type with a document that uses frames (e.g. you must use the "Transitional" document type to get the "target" attribute), or by using vendor proprietary extensions such as "marginheight" (this is usually fixed by using CSS to achieve the desired effect instead).

This error may also result if the element itself is not supported in the document type you are using, as an undefined element will have no supported attributes; in this case, see the element-undefined error message for further information.

How to fix: check the spelling and case of the element and attribute, (Remember XHTML is all lower-case) and/or check that they are both allowed in the chosen document type, and/or use CSS instead of this attribute.

4. **Error** *Line 22 column 34: value of attribute "NORESIZE" cannot be "NO"; must be one of "NORESIZE".*

```
scrolling="yes" noresize="NO " marginwidth="0" marginheight="0">
```

The value of the attribute is defined to be one of a list of possible values but

in the document it contained something that is not allowed for that type of attribute. For instance, the "selected" attribute must be either minimized as "selected" or spelled out in full as "selected="selected"; a value like "selected="true" is not allowed.

5. **Error** *Line 27 column 49: value of attribute "NORESIZE" cannot be "NO"; must be one of "NORESIZE".*

```
name="rightFrame" scrolling="NO" noresize="NO" >
```

The value of the attribute is defined to be one of a list of possible values but in the document it contained something that is not allowed for that type of attribute. For instance, the "selected" attribute must be either minimized as "selected" or spelled out in full as "selected="selected"; a value like "selected="true" is not allowed.

6. **Error** *Line 30 column 9: document type does not allow element "NOFRAMES" here.*

```
<noframes >
```

The element named above was found in a context where it is not allowed. This could mean that you have incorrectly nested elements -- such as a "style" element in the "body" section instead of inside "head" -- or two elements that overlap (which is not allowed).

One common cause for this error is the use of XHTML syntax in HTML documents. Due to HTML's rules of implicitly closed elements, this error can create cascading effects. For instance, using XHTML's "self-closing" tags for "meta" and "link" in the "head" section of a HTML document may cause the parser to infer the end of the "head" section and the beginning of the "body" section (where "link" and "meta" are not allowed; hence the reported error).
